PROFESSOR LUIZ FERNANDO

SUMÁRIO

- 3- anamnese
- 4- caso de uso descritivo
- 5- diagrama de caso de uso
- 6-8 telas
- 9-33 códigos

ANAMNESE

Parte gráfica:

O jogo é 2D, ou seja, duas dimensões X e Y (cima e baixo respectivamente). Devido ao jogo ser 2D o gráfico dele terá base em "sprites" que são, basicamente, imagens em png.

Jogabilidade:

Não terá nenhum tipo de combate direto. O jogo teria como base uma exploração do mundo.

História:

A história é linear, segue uma sequência de acontecimentos e interações simples.

CASO DE USO

Descritivo

O jogador abre o jogo em seu computador, que logo em seguida, entrará no menu principal. Onde será apresentado algumas opções, como Jogar e Sair. O botão sair encerra o processo do jogo, fechando-o. Já o botão jogar o levará para um nível onde será capaz de começar o jogo em si. A Game Engine, Unity, é responsável não só pela maior parte dos cálculos mas também pelo registro de "inputs" do usuário. A movimentação é restrita nos eixos X e Y. A mecânica de "vault", que é o que permite o jogador escalar/se pendurar em certos objetos, interagir com objetos, também irá fazer parte da jogabilidade. Também é possível salvar o progresso, como a última localização que o jogador estava e o seu progresso nas "quests" (objetivos).

DIAGRAMA DE CASO DE USO

TELAS

(Menu inicial)

شنقا تمضمر فالديفقا

فالأدفأ المخمص فالديدق

Outras áreas relacionadas a Engine:

Controle de Animação:

CÓDIGOS:

Código responsável pela movimentação dos pássaros:
